**MODEL 159-UHF
OSCILLATOR**
(420 Mc to 940 Mc)

4 TIMES MORE SENSITIVE THAN THE
FAMOUS MODEL 59

TAUT-BAND ILLUMINATED METER

INTERNAL/EXTERNAL MODULATION
OR CW

ACCURATE INDIVIDUALLY CALIBRATED
OSCILLATORS

Three oscillators cover the frequency range from
100 kilocycles to 940 megacycles.

Power supply is solid state and provides regulated
plate supply voltage to the oscillator units. A sen-
sitive, taut-band meter is diode-protected from
mechanical damage due to overload.

USES

- For determining resonant frequency of
tuned circuits including antennas,
transmission lines, etc.
- For checking quartz crystals.
- For locating faults in transmission lines.
- As an auxiliary signal generator — modulated
or unmodulated.
- As an absorption type wave meter.
- For preliminary tracking of receivers and
transmitters.
